

Review and Practice: Home Wi-Fi Network

Task – 1 : Open Cisco Packet Tracer and create a new project file named 'HomeWiFiNetwork.pkt' with three PCs and one wireless router connected appropriately.

Solution : Create the Packet Tracer Network

Task – 2 : Assign static IP addresses to each PC in your Packet Tracer network so they are on the same subnet (e.g., 192.168.10.x), and configure the default gateway to the router's IP.

Solution : Assign Static IP Addresses

We'll use the network:

192.168.10.0/24

Router:

192.168.10.1

IP addressing table

Device	IP Address	Subnet Mask	Default Gateway
Router	192.168.10.1	255.255.255.0	—
PC1	192.168.10.2	255.255.255.0	192.168.10.1
PC2	192.168.10.3	255.255.255.0	192.168.10.1
PC3	192.168.10.4	255.255.255.0	192.168.10.1

All three PCs are therefore on the same subnet.

Task – 3 : Test connectivity by using the Packet Tracer 'ping' tool to verify that all PCs can communicate with each other and the router.

Hint: Use the Command Prompt tool on each PC and type 'ping [other PC's IP]'.\

Solution : **Test Connectivity**

Open **PC → Desktop → Command Prompt** and use ping to test communication.

From PC1:

ping 192.168.10.3

ping 192.168.10.4

ping 192.168.10.1

From PC2:

ping 192.168.10.2

ping 192.168.10.4

ping 192.168.10.1

From PC3:

ping 192.168.10.2

ping 192.168.10.3

ping 192.168.10.1

If configured correctly, each ping should show **Reply from...**, confirming connectivity.

Task – 4 : Document each step you took to build and configure your Packet Tracer network, including screenshots of your topology and the IP configuration windows for each PC, in a Word or PDF file.

Solution :
